Market Place Project

Introduction:

In today's fast-changing environment, it's extremely important for a system to response client needs in the most effective and timely manner. If your customers wish to see your electronic market and have instant access to your product. So, our system response the client's needs efficiently.

The project "Gwadar Electronic Market" is an E-commerce store. Which is the best platforms for Gwadar or nearby areas from where you can get multiple category and qualitative laptop and Mobile with reasonable price. . At our Website Gwadar Electronic Market you can get laptops and mobiles we have different range laptops and mobiles in the laptop we sell Dell, Hp, Apple and the Mobile Nokia, Samsung, Huawei where the customer can also be facilitated with discount on the product and we provide good quality Laptops and Mobile with responsible price our products are new brands and original costumer can order any time of the day we assure our customers that you are at right place. This E-commerce store is facilitator for the people of Gwadar to Search and purchase the best product rather than using manual system for purchasing.

1. Two different type of Accounts

- Admin/This is the main module in the proposed project. His role is supreme in this project. The admin can read and write information about any product. Admin also can add, delete and update the products and access user accounts and admin has authority to control overall activities of this website.
- User / User is the valuable module of the system. The main target of the web site is user. User can get benefits by this website. This account will be used for user-based tasks like creating an user account /making a deal by purchasing a product, update invoice, print bills, return items add stock, adding a book to shopping cart, editing and viewing their transnational details etc.

2. Add account page:

- System only provide admin, to update and add account info.

3. View/Add Customer:

- These pages can be accessed by admin, System enable to give authority to admin to add and view Customer.
- The transaction between customer and company can also be viewed in this page

4. Inventory:

- These pages can be accessed by admin i.e., User Account which add or view a Stocks
- Here, admin can also take advantages by viewing which product is selling more usual through a graph

6. Returns:

- These pages can be accessed by admin i.e User Account which add or view returns
- We return an item it automatically returned to inventory stock unless it is damaged

7. Payment:

Online payment refers to money that is exchanged electronically. Typically, this involves use of computer networks, **the internet** and digital stored value systems. **Online payment** usually is the transaction that results in transfer of money from the customer bank or credit card account to your bank account.

User can make the payment via the secured payment via Cash on Delivery Method

8. Stock:

Stock is used to manage the inventory add / remove stocks from inventory

9. Dashboard Panel:

Dashboard is a back end reporting interface that allows you to monitor your **website** performance by tracking metrics like visitors, pageviews, and online conversions.

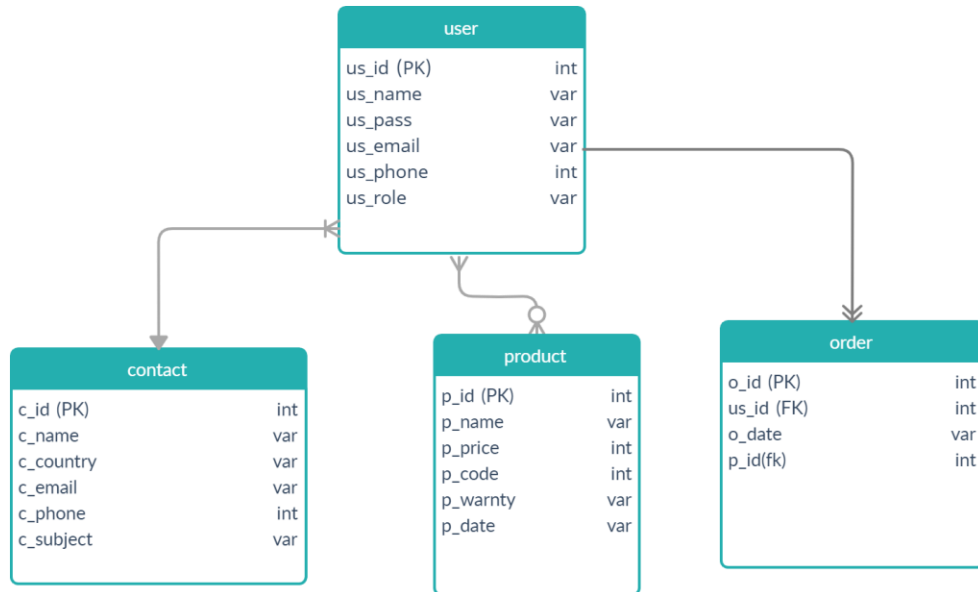

10. Products Management:

As developers we pay attention on managing all the products, assigning category, pages, pricing and writing description for the products. Sorting them in their relevant section with due offers and tax/discount rates.

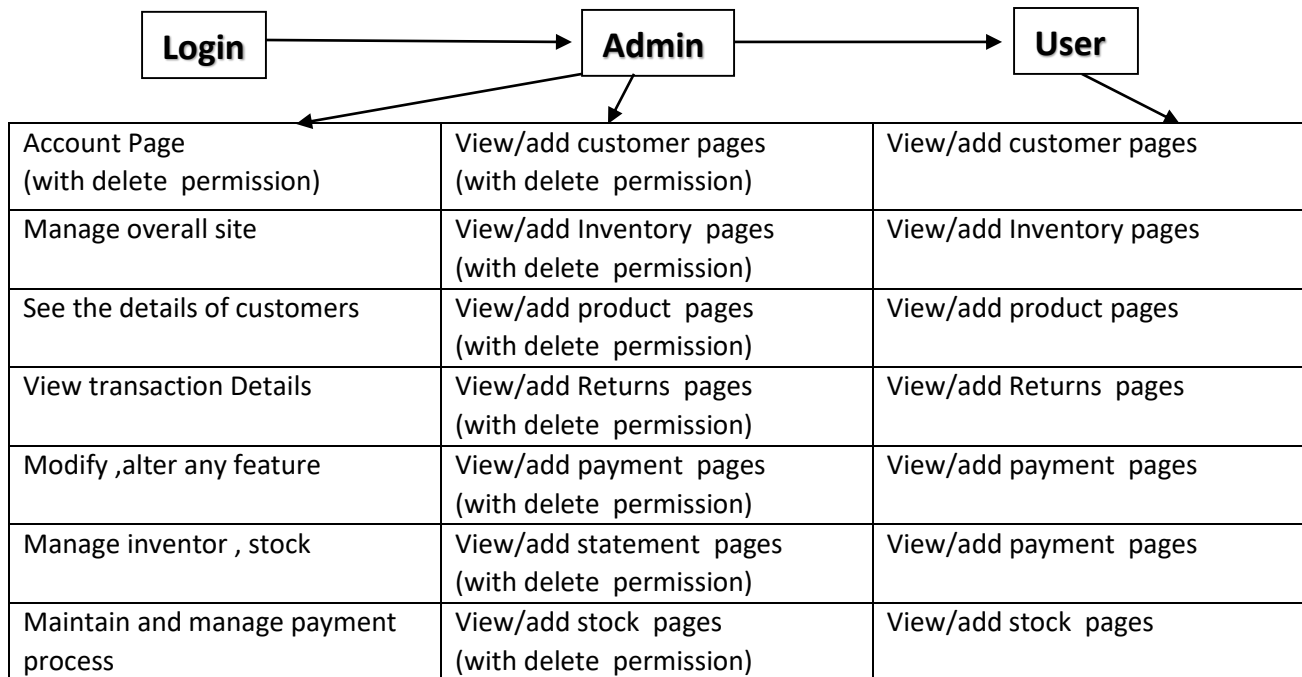

11. Electronic gadgets:

Portable electronic devices including smartphone, laptop, and notebook pcs will be sold in the website. Apart from it, its peripheral devices and other supporting gadgets are also available in the production section of the website.
